

## Straight drain valve 1/2"

The 1/2" straight drain valve is designed for the controlled draining of liquids from systems. Its simple design ensures easy operation and high tightness, making it an ideal solution for both domestic and industrial installations. This product is suitable for central heating systems, water supply systems, and various types of tanks and devices requiring periodic draining. Its robust construction with durable materials ensures corrosion resistance and long service life. The ergonomic handle allows for quick opening and closing of the valve, even in hard-to-reach places.

**Technical data:**

Material:	brass
Max. operating pressure:	6 bar
Max. temperature:	100°C
Seal:	EPDM

Type	Catalog number
Straight drain valve 1/2"	100009
