

Brass connector with nuts 1" x 1"

Brass connector with nuts 1" x 1" is a hydraulic element used to connect two pipes with the same nominal diameter of 1 inch. Thanks to precisely made threads, it ensures a tight and durable connection in water, gas or heating installations. The nuts facilitate assembly and disassembly, which allows for convenient servicing of the system without the need to use specialist tools. The brass from which the connector is made is characterized by high resistance to corrosion and mechanical damage, which guarantees long life and reliability in various operating conditions.

Technical data:

Material:	brass
Maximum pressure:	6 bar
Maximum temperature:	110°C
